

# Gas reciprocating engines comprehensive modernization with MOTORTECH components

Comprehensive modernization allows all gas reciprocating engines to be controlled from single panel, combining:

- VariFuel fuel system
- Detonation control system
- Ignition system

## Advantages

- ✓ Increased engine efficiency
- ✓ Performance and productivity increase by >60%\*
- ✓ Load reduction on the connecting rod and piston group components
- ✓ Service interval extension
- ✓ Easy configuration, error logging

\*Depending on the equipment type. As an example, the results of the ignition system modernization for a Perkins 4000 are provided
