

Oil scraper rings

Maximum efficiency and equipment protection

- AGV oil scraper rings effectively remove oil from the entire rod surface and have drainage holes for the specific equipment operating conditions
- The oil scraper rings utilize razor blade technology: the precisely selected edge angle of the ring edge enables effective oil scraping without causing wear to the rod
- Custom oil scraper ring design for maximum performance and reliability, considering the application and materials to achieve the ideal balance of strength, flexibility, and durability
- Prevent oil from entering the gas seal and cylinders
- Constructed using both metal and polymer materials
